# TOMATO ENERGY

Scalable Safety Systems For Rapid Growth

## CLIENT OVERVIEW

Tomato Energy delivers renewable energy infrastructure projects in a fast-moving, competitive sector.

## CONTEXT CHALLENGE

As the group expanded from around 100 to over 400 employees, leadership needed confidence that health and safety was being managed consistently across all companies. Different systems, uneven standards and varying audit practices made it difficult to get a clear, reliable picture at board level. They needed unified governance that supported growth rather than slowing it down.

# OUR APPROACH

We focused on building systems that could scale with the business:

01

Implemented a digital-first reporting system for fast, consistent data capture.

02

Delivered practical frontline training so supervisors and teams understood expectations.

03

Aligned procedures across projects to reduce confusion and duplication.

04

Introduced clear KPIs and dashboards to give leadership early visibility of trends.

Everything was designed to work in the real world, not just in a policy document.

# IMPACT

Safety culture aligned with the pace of expansion.

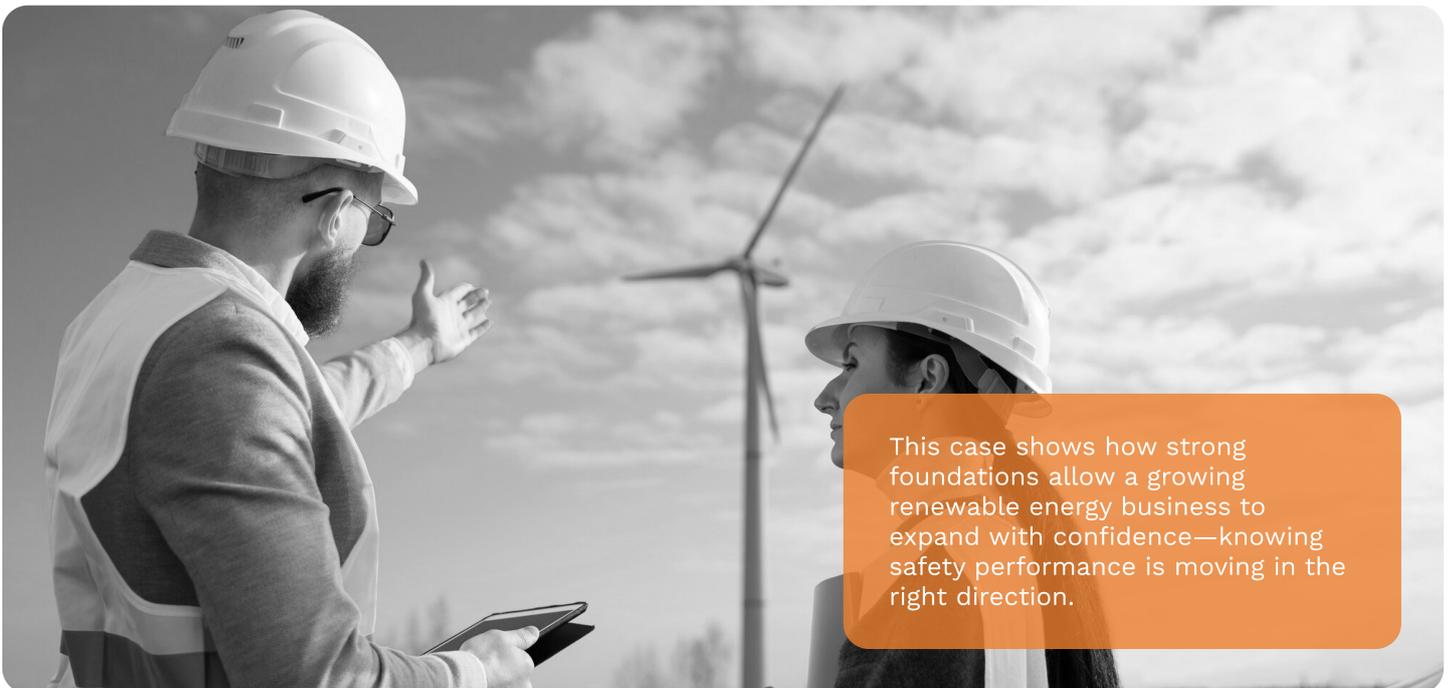

Measurable improvements in safety KPIs within six months.

A scalable system that supports continued growth without constant reinvention.

## WHY IT MATTERS

This case shows how strong foundations allow a growing renewable energy business to expand with confidence—knowing safety performance is moving in the right direction.

# THANK YOU!

Thank you for taking the time to review this case study. Each engagement delivered by Wentworth Safety is approached with discretion, clarity, and a focus on long-term compliance and governance. Our work is designed to support leadership teams in managing risk confidently and meeting regulatory expectations.
