CDM PROJECT

Principal Designer
Support From Design
To Delivery

CLIENT OVERVIEW

A construction project involving multiple contractors and design disciplines, with a client committed to managing risk properly from the outset.

CONTEXT CHALLENGE

The client needed Principal Designer support that went beyond ticking the CDM box. They wanted active design-risk management, clear coordination and practical guidance throughout the project lifecycle.

OUR APPROACH

Acting as Principal Designer, we:

01

Engaged early with the client, designers and contractors to understand the project and its risks.

02

Challenged design decisions where they introduced avoidable risk, offering safer alternatives.

03

Ensured CDM duties were understood and discharged without unnecessary bureaucracy.

04

Coordinated design-risk information so it was shared clearly and on time.

05

Maintained a practical, solutions-focused approach to keep the project moving.

The goal was to proactively manage design risk and ensure practical CDM compliance throughout the project.

IMPACT

Reduced residual risks through better design choices.

A project team that understood and fulfilled its CDM responsibilities.

Fewer surprises during construction thanks to early planning and coordination.

WHY IT MATTERS

This case demonstrates how hands-on Principal Designer support can make projects safer, smoother and more defensible—without slowing delivery.

THANK YOU!

Thank you for taking the time to review this case study. Each engagement delivered by Wentworth Safety is approached with discretion, clarity, and a focus on long-term compliance and governance. Our work is designed to support leadership teams in managing risk confidently and meeting regulatory expectations.
